(54) METHOD AND DEVICE FOR MONITORING USE OF FORGED BILL

(57)Abstract:

PURPOSE: To monitor the use of the forged bill and prevent it from being used by making a specific display on a display device when the inputted number or rate of bills of cash which can not be discriminated is larger than a specific value.

CONSTITUTION: A discrimination part 20 investigates a paid bill by various sensors and decides the kind of money and genuiness or falseness from their data. A count part 40 counts the number of bills which can be discriminated and the number of bills which are rejected respectively. A rejected bill temporary storage part 52 temporary stores the bills which can not be discriminated. After the discrimination, the bills in a rejection BOX 52 are returned to a money reception and payment part 10 and after a user confirms the amount of money paid, the bills in the temporary storage part 50 are moved to a storage part 55. A control part 60 refers to the result of the count part 40, and sends an indication for storing discrimination data in a storage part 70 and an indication for turning on a light 80

when the number of the rejected bills is larger than a certain number or when the ratio of the rejected bills to the number of received bills is larger than the certain value.
